

Project Performance Test

Model Performance Testing Template

Date	03 July 2026
Team ID	SWTID-2026-4978
Project Name	Strategic Product Placement Analysis
Maximum Marks	4 Marks

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values
1.	Data Rendered	Dataset Details: Product Positioning.csv Verification Status: Successfully loaded 10 fields and exactly 1,000 active rows with zero value drops or schema alignment exceptions into the analytical environment. All headers map seamlessly to storefront layout attributes.
2.	Data Preprocessing	Metadata Configuration: Forced strict casting of measures into consistent technical formatting. Verified numerical floating-point precision metrics for active fields (Price, Competitor's Price) and locked categories (Product Position, Foot Traffic, Promotion) to dynamic text strings with blank cell clearing rules.
3.	Utilization of Filters	Operational Control: Deployed 3 dynamic dashboard multi-select global filters (Product Category, Product Position, and Consumer Demographics) linked globally across worksheets. Real-time rendering test shows cross-filtering executes with no latency or cache misses.
4.	Calculation Fields Used	Custom Business Logic: Created structural logical syntax operations directly inside the metadata layer to isolate average price metrics against market competitors. Custom functions successfully filter spatial margins to display performance lifts independent of background promotional variances.
5.	Dashboard Design	Visual Integration Workspace: 4 complete sheets compiled symmetrically into a singular interactive canvas matrix. Elements include Sheet 2 (Hierarchical Treemap), Sheet 3 (Sales Volume Matrix Grid), Sheet 5 (Consumer Demographic Donut Layout), and Sheets 6 & 7 (Average Pricing Pie Visualizations) grouped with full grid alignment.
6.	Story Design	Narrative Sequence Navigation: 8 multi-page visual navigation sheets arranged sequentially into an interactive storyboard framework. Flow successfully tracks historical product pricing benchmarks directly through segmented demographic views and recommended placement strategies.
