

Project Design Phase

Proposed Solution Template

Date	02 July 2026
Team ID	SWTID-2026-4978
Project Name	Strategic Product Placement Analysis
Maximum Marks	2 Marks

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Retail managers rely on subjective habits or generic layouts instead of empirical tracking data, trapping high-margin items in low-traffic floor spaces and fracturing potential department revenue lift.
2.	Idea / Solution description	An integrated, interactive 8-sheet Tableau dashboard story workbook that maps row-level transactional logistics across category sales velocity indexes, consumer demographic profiles, and marketplace competitor price matrices.
3.	Novelty / Uniqueness	Replaces standard, flat row logs with clean, real-time spatial cross-filtering dashboard actions where drilling down into a customer profile instantly shifts floor display layout metrics.
4.	Social Impact / Customer Satisfaction	Improves the in-store user journey experience by naturally aligning shelf placement with specific local buyer segment expectations (Families, Students, Seniors), removing layout navigation confusion.
5.	Business Model (Revenue Model)	Optimizes immediate brick-and-mortar storefront spatial real estate margins to minimize static layout inventory drag, triggering direct average transaction sales volume growth.
6.	Scalability of the Solution	Built upon a high-performance Tableau Hyper extract processing layer, capable of scaling to digest millions of additional transaction records smoothly without latency drops.
